

**Galaxy Peach**  
*Prunus persica 'Galaxy'*

Height: 15 feet

Spread: 15 feet

Sunlight: ○

Hardiness Zone: 5

Other Names: Donut Peach, *Prunus persica* var. *compressa*

**Description:**

An interesting variety, presenting showy pink flowers in spring, followed by large doughnut shaped fruit with sweet white flesh and fine skins, blushed with red; freestone; susceptible to late spring freezes; needs full sun and well-drained soil

**Edible Qualities**

Galaxy Peach is a small tree that is typically grown for its edible qualities. It produces large gold oval fruit (technically 'drupes') with a brick red blush and white flesh which are usually ready for picking in early summer. Note that the fruits have hard inedible pits inside which must be removed before eating or processing. The fruits have a sweet taste and a juicy texture.

The fruit are most often used in the following ways:

- Fresh Eating
- Cooking
- Baking
- Preserves
- Canning

**Features & Attributes**

Galaxy Peach is smothered in stunning clusters of fragrant shell pink flowers along the branches in early spring, which emerge from distinctive pink flower buds before the leaves. It has dark green deciduous foliage. The narrow leaves turn yellow in fall. The fruits are showy gold drupes with a brick red blush, which are carried in abundance in early summer. The fruit can be messy if allowed to drop on the lawn or walkways, and may require occasional clean-up.

This is a deciduous tree with a more or less rounded form. Its average texture blends into the landscape, but can be balanced by one or two finer or coarser trees or shrubs for an effective composition. This plant will require occasional maintenance and upkeep, and is best pruned in late winter once the threat of extreme cold has passed. Gardeners should be aware of the following characteristic(s) that may warrant special consideration;

- Messy
- Insects
- Disease

Aside from its primary use as an edible, Galaxy Peach is suitable for the following landscape applications;

- Accent
- General Garden Use
- Orchard/Edible Landscaping

### **Planting & Growing**

Galaxy Peach will grow to be about 15 feet tall at maturity, with a spread of 15 feet. It has a low canopy with a typical clearance of 2 feet from the ground, and is suitable for planting under power lines. It grows at a medium rate, and under ideal conditions can be expected to live for 40 years or more. This is a self-pollinating variety, so it doesn't require a second plant nearby to set fruit.

This tree is typically grown in a designated area of the yard because of its mature size and spread. It should only be grown in full sunlight. It does best in average to evenly moist conditions, but will not tolerate standing water. It is not particular as to soil type or pH. It is highly tolerant of urban pollution and will even thrive in inner city environments, and will benefit from being planted in a relatively sheltered location. This is a selected variety of a species not originally from North America.
